

### Instruction :

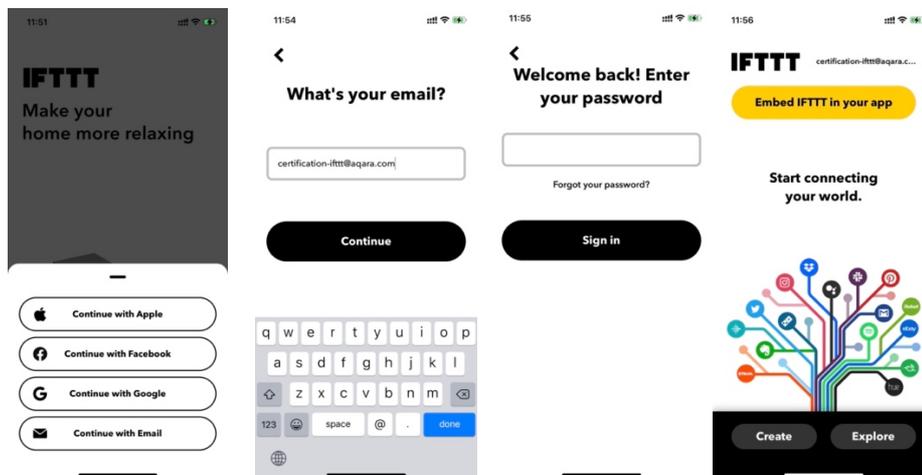

1. Complete device networking configuration in the Aqara Home app

Complete the device's networking configuration according to the prompts in the app.

2. Log into IFTTT

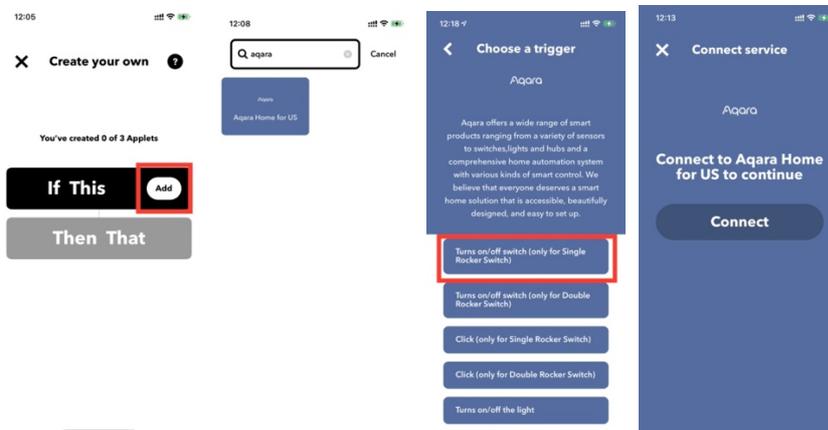

(The following instructions are based on the iOS client)

Tap on the IFTTT app to enter the login screen. Enter your email and password. Then tap "Sign in". You can also use your Apple, Facebook or Google account. Once the login is successful, the app screen will look like the picture below.

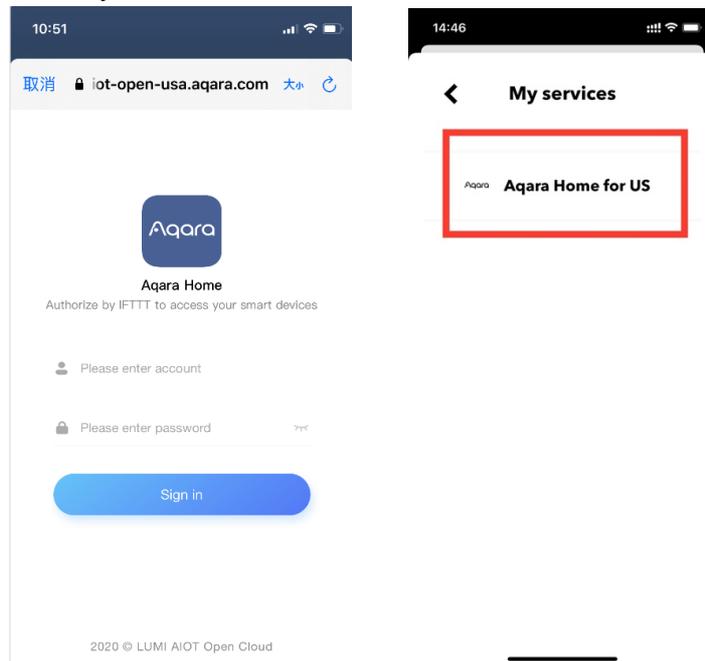

3. Link Aqara Home account with IFTTT

(1) Tap the "Create" tab at the bottom of the screen. Then tap "Add" in the "If This" tab to enter search page. Type "Aqara Home" in the search box, select the "Aqara Home for US" option, then choose one trigger to enter next page. Tap "Connect" to enable Aqara Home.

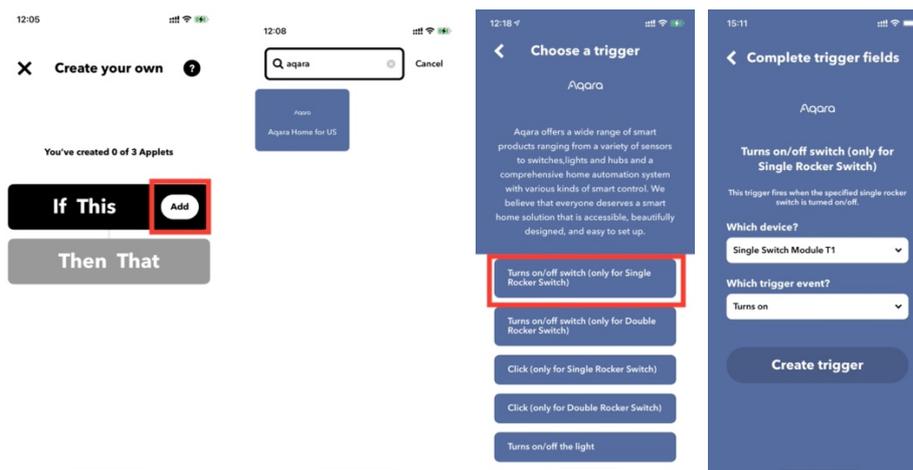

- (2) On the new screen, enter your Aqara Home app account and password, and then tap on “Sign in” to link the account. Once successful, it will appear on the services list in “My services”.

#### 4. Create Applets to control your device

- (1) Create “If This” to set the trigger condition

Tap “Add” in “If This” tab to add a condition, enter “Aqara Home” in search box on the new screen, and select the Aqara Home for US option. After then, choose an trigger corresponding to Aqara Home, select the device and trigger event on the trigger fields page. Tap “Create trigger” and jump back to the Applet creation page.

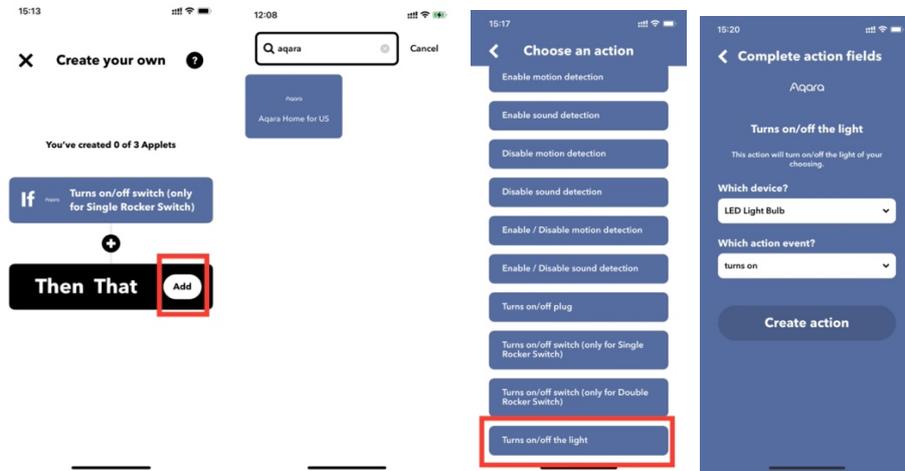

Note: the above uses Aqara Home as an example. You can also set other services as the trigger for “If This”.

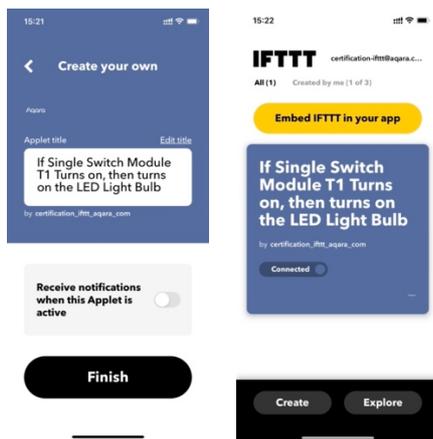

- (2) Create “Then That” to set the action

After setting the trigger, tap “Add” in “Then That” to set the corresponding action.

enter “Aqara Home” in search box on the new screen and select the Aqara Home for US option. After then, choose an action corresponding to Aqara Home, select the device and action on the action fields page. Tap “Create action” to save the configuration.

Tap on “Finish” to complete the creation of this Applet and save it automatically.

**Note:** If you create an Applet in IFTTT, then Aqara will create an Automation in Aqara Home app automatically. You can delete it at Aqara Home app, but it won't affect the Applet in IFTTT. If the trigger fires again, it will create a same Automation again. But if you delete Applet in IFTTT, the corresponding Automation in Aqara Home will be deleted as well.
